

The payment form test cases are provided as an example of the test case structure and formatting and are not related to the QA Practice website functionality.

ID	Summary	Steps	Test Data	Expected Result	Actual Result	Status Pass/Fail
Functional testing						
Positive						
Payment_TC_001	Payment with valid data	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter a valid card number into the "Card number" field 2. Select a valid expiry date in the "Expiry date" field 3. Enter a valid CVV into the "CVV/CVC/CID" field 4. Click on the "Pay" button	1. Card number: 4111 1411 1141 1114 2. Expiry date: 01/2030 3. CVV: 123	- Payment is successfully processed - Success message is displayed		
Payment_TC_002	Payment with Visa card	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter a valid Visa card number into the "Card number" field 2. Fill in all other fields with valid data 3. Click on the "Pay" button	Visa Card number starts with: 4 Example: 4111 1111 1111 1111	Payment is successfully processed		
Payment_TC_003	Payment with MasterCard	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter a valid MasterCard number into the "Card number" field 2. Fill in all other fields with valid data 3. Click on the "Pay" button	MasterCard Card number starts with: 51–55 or 2221–2720 Example: 5555 5555 5555 4444	Payment is successfully processed		
Payment_TC_004	Payment with American Express card	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter a valid American Express card number into the "Card number" field 2. Fill in all other fields with valid data 3. Click on the "Pay" button	American Express Card number starts with: 34 or 37 Length: 15 digits Example: 3782 822463 10005	Payment is successfully processed		
Payment_TC_005	Payment with Diners Club card	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter a valid Diners Club card number into the "Card number" field 2. Fill in all other fields with valid data 3. Click on the "Pay" button	Diners Club Card number starts with: 300–305, 36, or 38 Example: 3056 9309 0259 04	Payment is successfully processed		
Payment_TC_006	Payment with Discover card	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter a valid Discover card number into the "Card number" field 2. Fill in all other fields with valid data 3. Click on the "Pay" button	Discover Card number starts with: 6011, 65, or 644–649 Example: 6011 1111 1111 1117	Payment is successfully processed		
Negative/validation						
Payment_TC_007	Payment with invalid card number	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter an invalid card number into the "Card number" field 2. Select a valid expiry date in the "Expiry date" field 3. Enter a valid CVV into the "CVV/CVC/CID" field 4. Click on the "Pay" button	1. Card number: 1111 1111 1111 1111 2. Expiry date: 01/2030 3. CVV: 123	- Error message for invalid card number is displayed - Card number field is highlighted in red - Payment is not processed		
Payment_TC_008	Payment with expired card	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				
		Steps: 1. Enter a valid card number into the "Card number" field 2. Select an expired date in the "Expiry date" field 3. Enter a valid CVV into the "CVV/CVC/CID" field 4. Click on the "Pay" button	1. Card number: 4111 1411 1141 1114 2. Expiry date: 01/2020 3. CVV: 123	- Error message for expired card is displayed - Expiry date field is highlighted in red		
	Payment without CVV	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded				

Payment_TC_009		Steps: 1. Enter a valid card number into the "Card number" field 2. Select a valid expiry date in the "Expiry date" field 3. Leave the "CVV/CVC/CID" field empty 4. Click on the "Pay" button	1. Card number: 4111 1411 1141 1114 2. Expiry date: 01/2030 3. CVV: (empty)	- Validation error message is displayed for empty required fields - Fields are highlighted in red		
Payment_TC_010	Payment with invalid CVV	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded Steps: 1. Enter a valid card number into the "Card number" field 2. Select a valid expiry date in the "Expiry date" field 3. Enter an invalid CVV into the "CVV/CVC/CID" field 4. Click on the "Pay" button	1. Card number: 4111 1411 1141 1114 2. Expiry date: 01/2030 3. CVV: 00	- Error message for invalid CVV is displayed - CVV field is highlighted in red		
Payment_TC_011	Return to application from payment page	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded Steps: 1. Do not enter any data and click on the "Cancel" button		- User is redirected to the previous page		
Payment_TC_012	Payment with empty fields	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded Steps: 1. Leave all fields empty and click on the "Pay" button		- Validation error messages are displayed: - Card number field is empty - Expiry date field is empty - CVV field is empty - Fields are highlighted in red		
Payment_TC_013	Card number input mask validation	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded Steps: 1. Enter letters into the "Card number" field 2. Enter special characters into the "Card number" field	1. Card number: klm1 2. Card number:)"?+==	- Card number field accepts only numeric values - Invalid characters cannot be entered		
Payment_TC_014	Payment with unsupported card type	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded Steps: 1. Enter an unsupported card number into the "Card number" field 2. Click on the "Pay" button	Maestro Card number starts with: 50, 56–69, 5018, 5020, 5038	Error message is displayed indicating that the card type is not supported		
Payment_TC_015	Card type auto-detection	Preconditions: - User has an active order - Order details (merchant, amount, order ID, description) are displayed - Payment form is loaded Steps: 1. Start entering a card number into the "Card number" field 2. Observe the card type detection and logo change		- System automatically detects the card type (Visa, MasterCard, American Express, Diners Club, Discover) - Correct logo is highlighted
