

I tested the Practice Form on the QA-Practice website: <https://qa-practice.com/>.

I checked the main form fields, required fields, dropdowns, Date of Birth field, file upload, checkboxes, and the Submit button. I tested positive and negative scenarios, such as valid data, empty fields, invalid characters, long values, incorrect email format and future date of birth. I found 9 issues in the form and documented 5 of them as bug reports.

The main problems were missing validation messages, problems with the Date of Birth field, and missing City value after submitting the form. The main positive flow works, but some validation and displayed data should be improved.

The Practice Form functionality is covered with a checklist. A separate detailed test case for payment form (Screenshot) validation is included to demonstrate the test case structure.
